## ABOUT US | ANEI MĀTOU

The Kaipara Moana Remediation Programme is the largest landscape programme of its scale underway in New Zealand.

It represents new models of co-governance, planning, collaborating and problem-solving to restore the health and mauri of the Kaipara Moana.

The vision was set by the parties who signed a Memorandum of Understanding - Ministry for the Environment, Northland Regional Council, Auckland Council, Ngā Maunga Whakahī o Kaipara, Te Uri o Hau and Te Runanga o Ngāti Whātua.

Our mahi is guided by Four Pou. Each of the the Pou individually represent challenges and opportunities, while together the Pou represent KMR's journey towards achieving success. The project is about working together, collaborating and looking at the harbour as a whole. It's the start of a generational change.

Our vision The mauri of the Kaipara Moana is restored & protected,
and its significance – for Kaipara Uri and all New
Zealanders – is recognised.

WHENUA WHĀNUI FUND

#### **SEDIMENT REDUCTION**

To restore the health and mauri of the Kaipara moana, our key target is to reduce the amount of sediment entering the harbour.

We do this by working with landowners, hapū, marae and community groups to develop property specific sediment reduction plans. The SRP is an overview of:

- the catchment and property context
- the needs and aspirations of landowners
- the sediment issues, risks and opportunities
- and a series of remediation priorities to fence and plant water ways

To support this work, we'll fund up to 50%\* of the costs of: fencing to exclude stock waterways, and riparian planting, its preparation and maintenance.

The remaining 50% is your in-kind contribution. We can contribute a modest amount to groups for project management and education around restoration efforts.

### **HOW IT WORKS | HEI ARATAKI**

#### You've got:

- A community project, that may need some fencing and plants
- A project wanting to do some improvement work on public land (e.g. Council, DOC, or QE II),
  - Māori owned land that borders a river, waterway or the harbour.

A minimum of .25 ha to fence/plant

You head to our website
(www.kmr.org.nz) and fill out an
Expression of Interest, where we register
your interest and get a few more details
about the potential of your project and
proposals.

We will come and meet with you on the land and assist you to draw up plans for remediation work, and or design strategies for engagement and education.

Once your proposal is approved, you will start the planned work.

A KMR trained field advisor will work with you as required to prepare sediment reduction plans, and to assure the quality of the remediation work
